Here is a one-volume guide to just about everything computer-related for amateur astronomers! Today's amateur astronomy is inextricably linked to personal computers. Computer-controlled "go-to" telescopes are inexpensive. CCD and webcam imaging make intensive use of the technology for capturing and processing images. Planetarium software provides information and an easy interface for telescopes. The Internet offers links to other astronomers, information, and software. The list goes on and on. Find out here how to choose the best planetarium program: are commercial versions really better than freeware? Learn how to optimise a go-to telescope, or connect it to a laptop. Discover how to choose the best webcam and use it with your telescope. Create a mosaic of the Moon, or high-resolution images of the planets... Astronomy with a Home Computer is designed for every amateur astronomer who owns a home computer, whether it is running Microsoft Windows, Mac O/S or Linux. It doesn't matter what kind of telescope you own either - a small refractor is just as useful as a big "go-to" SCT for most of the projects in this book.

Ebook Discovering the Universe, Observing Projects Workbook + Starry Night Enthusiast Cdr W. H. Freeman

Available for packaging, this book of seventeen comprehensive lab activities for Starry Night™ provides even more opportunities to explore the cosmos. Features include: • Mac and PC friendly • three times as many exercises • much more comprehensive • can be assigned as projects or homework

Night Sky With the Naked Eye W H Freeman & Company

BLAST OFF TO THE FINAL FRONTIER WITH 101 OUT-OF-THIS-WORLD PROJECTS YOU CAN EASILY BUILD YOURSELF! The sky is not the limit! Universe Observing Projects W H Freeman & Company

Month by month, star by star, object by object, Stephen James O'Meara takes readers on a celestial journey to many of the most prominent stars and constellations visible from mid-northern latitudes. Filled with interesting anecdotes about the stars and constellations and their intriguing histories, this book is both a useful guide for amateur astronomers, and a great first-time reference for those just starting out. After describing a constellation's mythology, readers are guided in locating and identifying its brightest stars in the sky, as well as any other bright targets of interest - colourful stars, double or multiple stars, star clusters and asterisms, nebulae, galaxies, variable stars, and more. This book will help beginning stargazers become familiar with the stars and constellations visible from their backyards, and explore the brightest and best stars, nebulae, and clusters visible through inexpensive, handheld binoculars.

Universe: The Solar System Macmillan

Discovering the Universe: From the Stars to the Planets engages students with an inquiry-based exploration of the universe and the scientific process. Developed with a "big picture" approach, the text first explains how the stars, the galaxies, and the entire universe formed, and then discusses planets and other components of our solar system. Students follow this natural conceptual progression within a proven learning method designed to address misconceptions and build a deep understanding of science and the world around us.

Universe, Starry Night Enthusiast + Observing Project Workbook McGraw-Hill Science, Engineering & Mathematics

Understand and Enjoy the Wonders of the Stars with Fun Activities for the Whole Family Gain a

deeper appreciation of the universe and our place in it with *Night Sky with the Naked Eye*. Learn how to spot the International Space Station, follow the moon through its phases, forecast an aurora and watch a meteor shower along with traditional night sky activities such as identifying the bright planets, stars and constellations. Fun activities embrace modern technology with the best apps and websites that make it easy for anyone to observe the greatest spectacles of the sky without a telescope or other expensive equipment. An expert in his field, Bob King teaches night sky courses and makes cosmic mysteries practical and accessible for skywatchers new and old. Understand what makes stars twinkle and where meteors come from in this complete guide to the heavens. Unique illustrations and stunning photos help the reader understand the concepts presented. Tips on how to photograph satellites, eclipses and the aurora are also included. Unravel the secrets of the universe while deepening your appreciation of its beauty through this clear and concise guide.

Observer's Handbook McGraw Hill Professional

This comprehensive textbook for the two-term course focuses students on not only the foundational concepts of astronomy but on the process of scientific discovery itself—how we know what we know about the cosmos. Engagingly written and filled helpful pedagogical tools, the book also excels at dispelling widely held misconceptions and helping students avoid common pitfalls as they explore the heavens. Thoroughly updated, the new edition features the latest discoveries and new pedagogy, and is supported by an expanded media/supplements package centered on W. H. Freeman's extraordinary new online course space, LaunchPad.

12 Month Astroportal, Observing Projects Workbook & Starry Night Enthusiast DVD W H Freeman & Company

Universe. When it comes to staying current with latest discoveries, clearing away common misconceptions, and harnessing the power of media in the service of students and instructors, no other full-length introduction to astronomy can match it. Now the textbook that has evolved discovery by discovery with the science of astronomy and education technology for over two decades returns in spectacular new edition, thoroughly updated and offering unprecedented media

options. Available in Split Volumes Universe: Stars and Galaxies, Fourth Edition, 1-4292-4015-6
Universe: The Solar System, Fourth Edition, 1-4292-4016-4

Discovering the Universe Cambridge University Press

Freeman's briefest, least expensive introductory astronomy text. *Discovering the Essential Universe*, Fourth Edition (DEU 4e) is designed to help students overcome common misconceptions about astronomy. It provides up-to-date explanations of core concepts in a flexible and student-friendly text, supported by an impressive collection of multimedia resources developed by astronomy education researchers.

Loose-leaf Version for Discovering the Universe W. H. Freeman

Available for packaging with the text, and compatible with both PC and Mac, this book contains a variety of comprehensive lab activities for *Starry Night Enthusiast 5.8*.

Universe Macmillan

Explores the major themes of van Gogh's paintings and his life, as well as his ties to the Impressionist movements and Art Nouveau, devoting special attention to his painting "Starry Night."
