The Girl With No Name Viking

Four Colours Where do monkeys live? What do they eat? Are they like us? Monkeys are mammals with a tail! Come, discover the world of monkeys! Valerie Bodden tells you about how they live, what they look like, how they climb trees and much more... This book has amazing photographs in colour and fascinating facts about monkeys, big and small, young and grown up, in action and at play. Also included is a story from folklore about why monkeys look like people.

My Notebook 4 Houghton Mifflin Harcourt

A selection of counting rhyme stories featuring the infamous five little monkeys.

The People in the Trees Cambridge University Press

National Bestseller Winner of the National Book Critics Circle Award for Autobiography A New York Times Notable Book Geobiologist Hope Jahren has spent her life studying trees, flowers, seeds, and soil. Lab Girl is her revelatory treatise on plant life—but it is also a celebration of the lifelong curiosity, humility, and passion that drive every scientist. In these pages, Hope takes us back to her Minnesota childhood, where she spent hours in unfettered play in her father's college laboratory. She tells us how she found a sanctuary in science, learning to perform lab work "with both the heart and the hands." She introduces us to Bill, her brilliant, eccentric lab manager. And she extends the mantle of scientist to each one of her readers, inviting us to join her in observing and protecting our environment. Warm, luminous, compulsively readable, Lab Girl vividly demonstrates the mountains that we can move when love and work come together. Winner of the American Association for the Advancement of Science/Subaru Science Books & Film Prize for Excellence in Science Books Finalist for the PEN/E.O. Wilson Literary Science Writing Award One of the Best Books of the Year: The Washington Post, TIME.com, NPR, Slate, Entertainment Weekly, Newsday, Minneapolis Star Tribune, Kirkus Reviews

My Notebook 3 #N/A

The chimpanzee is one of our planet's best-loved and most instantly recognisable animals. Splitting from the human lineage between four and six million years ago, it is (along with its cousin, the bonobo) our closest living relative, sharing around 94% of our DNA. First encountered by Westerners in the seventeenth century, virtually nothing was known about chimpanzees in their natural environment until 1960, when Jane Goodall travelled to Gombe to live and work with them. Accessibly written, yet fully referenced and uncompromising in its accuracy and comprehensiveness, this book encapsulates everything we currently know about chimpanzees: from their discovery and why we study them, to their anatomy, physiology, genetics and culture. The text is beautifully illustrated and infused with examples and anecdotes drawn from the author's thirty years of primate observation, making this a perfect resource for students of biological anthropology and primatology as well as non-specialists interested in chimpanzees.

It Was a Beautiful Day and Other Personal Quiet Miracle Stories

Strelbytskyy Multimedia Publishing

Everyone loves chocolate, right? But how many people actually know where chocolate comes from? How it's made? Or that monkeys do their part to help this delicious sweet exist? This

delectable dessert comes from cocoa beans, which grow on cocoa trees in tropical rain forests. But those trees couldn't survive without the help of a menagerie of rain forest critters: a pollen-sucking midge, an aphid-munching anole lizard, brain-eating coffin fly maggots—they all pitch in to help the cocoa tree survive. A secondary layer of text delves deeper into statements such as "Cocoa flowers can't bloom without cocoa leaves . . . and maggots," explaining the interdependence of the plants and animals in the tropical rain forests. Two wise-cracking bookworms appear on every page, adding humor and further commentary, making this book accessible to readers of different ages and reading levels. Back matter includes information about cocoa farming and rain forest preservation, as well as an author's note. **Monkeys Live in Trees** Heinemann-Raintree Library Readers of exciting, challenging and visionary literary fiction—including admirers of Norman Rush's *Mating*, Ann Patchett's *State of Wonder*, Barbara Kingsolver's *The Poisonwood Bible*, and Peter Matthiessen's *At Play in the Fields of the Lord*—will be drawn to this astonishingly gripping and accomplished first novel. A decade in the writing, this is an anthropological adventure story that combines the visceral allure of a thriller with a profound and tragic vision of what happens when cultures collide. It is a book that instantly catapults Hanya Yanagihara into the company of young novelists who really, really matter. In 1950, a young doctor called Norton Perina signs on with the anthropologist Paul Tallent for an expedition to the remote Micronesian island of Ivu'ivu in search of a rumored lost tribe. They succeed, finding not only that tribe but also a group of forest dwellers they dub "The Dreamers," who turn out to be fantastically long-lived but progressively more senile. Perina suspects the source of their longevity is a hard-to-find turtle; unable to resist the possibility of eternal life, he kills one and smuggles some meat back to the States. He scientifically proves his thesis, earning worldwide fame and the Nobel Prize, but he soon discovers that its miraculous property comes at a terrible price. As things quickly spiral out of his control, his own demons take hold, with devastating personal consequences.

Summer of the Monkeys Penguin UK

Welcome to Magnolia Street, where Charlie has just moved into her new home. It isn't long before Charlie's exploring, meeting all of her new neighbors, and getting herself into trouble. Her adventures with her bound-to-be best friend Billy--tricking Charlie's older brother, making a racket on a bus trip to the museum, or digging up a box of buried treasure--make even ordinary exciting. This collection of interrelated short stories is a true delight, perfect for newly emerging independent readers. Both girls and boys will cheer for this spunky girl as she takes on Magnolia Street and blossoms day by day.

Rhyming text and illustrations outline the process by which latex is extracted from trees to make balloons.

The Ancestor's Tale Mysore Press

Raouf Mama is widely beloved by children and adults alike for his books and especially for his African and multicultural storytelling, which incorporates poetry, song, music, and dance. In Fortune's *Favored Child*, the master storyteller tells his own story, beginning in the West African country of Benin. Through a harrowing experience with sickness, an encounter with a clairvoyant traditional healer, and astonishing twists of fortune, the protagonist struggles to uncover his real identity, to get an education, and to make his own way in the world. His journey takes him to the shores of the United States to attend graduate school at the University of Michigan and begin a new chapter in his life. .

No Monkeys, No Chocolate Scribblers

Examines monkeys, including their physiology, anatomy, habitat, and behavior.

The Great Kapok Tree Anchor

Whatever their virtues, men are more violent than women. Why do men kill, rape, and wage war, and what can be done about it? Drawing on the latest discoveries about human evolution and about our closest living relatives, the great apes, "Demonic Males" offers some startling new answers to these questions.

Demonic Males Speedy Publishing LLC

Explains why cats and rats are not friends, why monkeys live in trees, and what rabbits have to do with why crocodiles stay in the water.

The Psychological Well-Being of Nonhuman Primates Yearling

Predictions of the coming collapse of Chinese politics are today commonplace, however this thought-provoking book explores a radically different alternative. China, it argues, is a one-party-dominated political system whose surprising levels of public support and resilience in the face of serious economic, environmental and social problems suggest that it is more durable than most outside observers suppose. China is not an ailing 'autocracy', a case of 'crony capitalism' or a blindly repressive 'authoritarian regime'. The rulers of China are in fact experimenting with a wide range of locally-made democratic tools designed to win the trust and loyalty of their subjects. Examples probed in this book include the injection of accountability mechanisms into state bureaucracy, the toleration of independent public opinion leaders, the growing reliance of Party officials and corporate executives on public opinion polls and 'democratic style', and the calculated use by Party officials of digitally networked media as early warning devices. Written for students and teachers, researchers and general readers fascinated by the rising global power of China, *When Trees Fall, Monkeys Scatter* shows why locally-made democratic practices often favour one-party rule and why China is becoming a globally significant political laboratory: a 21st century testing ground for a new type of top-down popular government at odds with power-sharing democracy as it was known during the past generation.

The Monkey Kingdom (Species of Monkeys) : 3rd Grade Science Series Orca Book Publishers

Chipmunks, monkeys, and owls live in trees. What else lives in a tree? Vibrant wildlife photographs with direct picture-to-text correspondence make this book an excellent choice for the budding zoologists in the classroom.

Monkeys are fascinating creatures in the sense that they have several familiar characteristics. The theory of evolution even states that we evolved from them. Learning about monkeys will help a child better understand Darwin's theory, and decide whether he/she would believe in it or not. Colorful and well-formatted, this educational book is definitely a must-have! *Monkeys' Magic Tree House* Gareth Stevens Publishing LLLP This early work is a fascinating collection of African folktales intended by the author 'for the children of America from whose racial inheritance the stories are taken'. Nine charming illustrations by Avery Johnson accompany the exploits of Wakaima the rabbit, Wanjovu the elephant, Wango the leopard and many more. Contents include: Wakaima and the Clay Man, Wakaima and the King's Cow, Wango and Wakaima, Wakaima and His Traps, How Mr. Elephant Got a New Hind End, The Lamb that Talked, The Grandmother and the Apes, How Wambwa Came to Be the Friend of Man, Why Monkeys Live in Trees, Wakikere and Wamusota, Sesota, the Great Snake of Kalungu, How Wakikere Lost His Tail, The Question About a Cow and a Note from the Author. Many of the earliest books, particularly those dating back to the 1900s and before, are now extremely scarce and increasingly expensive. We are republishing these classic works in affordable, high quality, modern editions, using the original text and artwork.
