This book defines and discusses the term “hidden geographies” in two ways: systematically and by presenting a variety of examples of the research fields and topics concerning hidden geographies, with the aim of stimulating further basic and applied research in this area. While the term is quite rarely used in the scientific literature (more often as a figure of speech than to illustrate or problematize its deeper meaning), we argue that hidden geographies are everywhere and many of them have significant impacts on (other) natural and social phenomena and processes, subsequently triggering changes, for example in landscape, economy, culture, health or quality of life. The introductory section of the book conceptualises hidden geographies and discusses

cognitive geography, symbolization of space, and the hidden geographies in mystical literature. Case studies of hidden environmental geographies address soils, air pollution, coastal pollution and the allocation of an astronomical tourism site. Revealing hidden historical and sacred places is illustrated through examples of the visualisation of the subterranean mining landscape, the analysis of the historical road network and trade, border stones and historical spatial boundaries, and the monastic Carthusian space. Hidden urban geographies are discussed in terms of the urban development of an entire city, presenting the role of geography in rescuing architecture, revealing illegal urbanisation, and the quality of habitation in Roma neighbourhoods. Case studies of hidden population geographies shed light on the ageing of rural populations and the impact of spatial-demographic disparities on fertility variations. Discussions of hidden social and

economic geographies problematize recent social changes and conflicts in a country, present the implementation of the fourth industrial revolution and borders as hidden obstacles in the organisation of public transport. Hidden geographies are explicitly linked to perceptions and explanations in case studies that address local responses to perceived marginalisation in a city, the solo women travellers' perceived risk and safety, and hidden geographical contexts of visible post-war landscapes. The book brings such a diversity of views, ideas and examples related to hidden geographies that can serve both to deepen their understanding and their various impacts on our lives and environment, and to attract further cross-disciplinary interest in considering hidden geographies – in research and in our every-day lives.

The issues surrounding the provision, preparation and development of food products is fundamental to every human being on the planet. Given the scarcity of agricultural land, environmental pollution, climate change and the exponential growth of the world's population where starvation and obesity

are both widespread it is little wonder that exploring the frontiers of food is now a major focus for researchers and practitioners. This timely Handbook provides a systematic guide to the current state of knowledge on sustainable food. It begins by analyzing the historical development surrounding food production and consumption, then moves on to discuss the current food crisis and challenges as well as the impacts linked to modern agriculture and food security. Finally, it concludes with a section that examines emerging sustainable food trends and movements in addition to an analysis of current food science innovations. Developed from specifically commissioned original contributions the Handbook's inherent multidisciplinary approach paves the way for deeper understanding of all aspects linked to the evolution of food in society, including insights into local food, food and tourism, organic food, indigenous and traditional food, sustainable restaurant practices, consumption patterns and sourcing. This book is essential reading for students, researchers and academics interested in the possibilities of sustainable forms of gastronomy and gastronomy's contribution to sustainable development. The title includes a foreword written by Roberto Flore, Head Chef at the Nordic Food Lab, Copenhagen, Denmark.

S'y mélangent savamment acuité perceptive, humour, sens du rythme, cynisme, mauvaise foi, misanthropie et un peu de sucre pour nous démontrer que rien n'est plus propice à la créativité et au rire que la souffrance infinie générée par la bêtise humaine.
