Edinburgh's historic New Town is one of the finest surviving examples of Georgian town planning. Even before work on the first phase of the New Town was completed, visitors were recording their very favourable impressions. An English tourist, Robert Heron, writing at the end of the 1790s, wrote that: "With regard to the buildings that have of late arisen in this City (Edinburgh) with such incredible rapidity, we may venture to say, that, in regularity and magnificence, they are scarcely equalled, or at least not excelled, by any in Europe...When Charlotte Square, at the west end of George Street, shall be

completed, this City will certainly surpass, in regularity and magnificence, every other in Great Britain." Edinburgh's New Town was created thanks to the determination and vision of a group of leading citizens led by Lord Provost George Drummond. Having obtained the permission of Parliament to extend the city's royalty to the open fields beyond the Nor' Loch, (now Princes Street Gardens.) The City, very commendably, decided to organise a competition to design what even then was called The New Town. This competition was won in 1766 by a young 23 year old architect James Craig. His plan was a simple but very effective grid-iron design with three parallel streets running from east to west with a grand square at either end of the principal street which was to be named George Street after the King, George III. The foundation of the first house, which still stands, in Thistle Court, was laid in November 1767. Progress westwards though was slow. It was not until 1792 that work started on the houses of Charlotte Square at the west end of George Street. Although commercial development has spoiled much of Princes Street, the majority of Edinburgh's first New Town has survived the passage of time. It remains as one of the finest surviving examples of Georgian Town Planning and as such was recognised, along with the neighbouring Old Town, as a UNESCO World Heritage Site in 1995. 'A Walk Through Edinburgh's New Town' is intended both as a guide book for our many visitors and as an informative reference book for those, perhaps living far away as expatriate Scots, who have an interest in Edinburgh's unique story. Sharing your journey are some true Edinburgh 'local heroes' - George Drummond, six times elected as Lord Provost who was the driving inspiration behind the planned New Town, Sir James Young Simpson who discovered the anaesthetic properties of chloroform in his house in Queen Street, Sir Walter Scott who penned many of his famous 'Waverley Novels;' in the study of his home in Castle Street and Sir John Sinclair who masterminded the production of 'The Statistical Account of Scotland' , a unique survey of the Scotland of the 1790s, from

his home in Charlotte Square. You will also meet some colourful eccentrics including the self-styled Sobieski brothers who claimed to be the grand-sons of Bonnie Prince Charlie and Hugo Arnot, the asthmatic lawyer, whose 'History of Edinburgh', published in 1779, gives us an invaluable account of the dramatic changes taking place in the city in the second half of the 18th century. From its early days, the New Town attracted famous visitors including Charles Dickens, Queen Victoria, Vincent Lunardi, the balloonist and George IV who made what was arguably the first modern royal visit, planned by Sir Walter Scott, in August 1822. 'A Walk Through Edinburgh's New Town' draws from several contemporary sources in describing such events as the visit of George IV, the financial troubles of Sir Walter Scott and the creation of the Earthen Mound. The book is generously illustrated with pictures of the New Town as we can enjoy it today as well as contemporary prints and drawings. The book concludes with a bibliography and some suggestions for further reading. If you enjoy this book then why not continue your journey by purchasing the companion title 'A Walk Down Edinburgh's Royal Mile.'

Auto Repair For Dummies, 2nd Edition (9781119543619) was previously published as Auto Repair For Dummies, 2nd Edition (9780764599026). While this version features a new Dummies cover and design, the content is the same as the prior release and should not be considered a new or updated product. The top-selling auto repair guide--400,000 copies sold--now extensively reorganized and updated Forty-eight percent of U.S. households perform at least some automobile maintenance on their own, with women now accounting for one third of this \$34 billion automotive do-it-yourself market. For new or would-be do-it-yourself mechanics, this illustrated how-to guide has long been a must and now it's even better. A complete reorganization now puts relevant repair and maintenance information directly after each automotive system overview, making it much easier to find hands-on fix-it instructions. Author Deanna Sclar has updated systems and repair information throughout, eliminating discussions of carburetors and adding coverage of hybrid and alternative fuel vehicles. She's also revised schedules for tune-ups and oil changes, included driving tips that can save on maintenance and repair costs, and added new advice on troubleshooting problems and determining when to call in a professional mechanic.

For anyone who wants to save money on car repairs and maintenance, this book is the place to start. Deanna Sclar (Long Beach, CA), an acclaimed auto repair expert and consumer advocate, has contributed to the Los Angeles Times and has been interviewed on the Today show, NBC Nightly News, and other television programs.

A synthesis of research and theory, this work chronicles the dawn of a new era in which the adaptability and autonomy of living organisms becomes the model for human made systems and machines. The author combines ideas from the Chaos Theory, cybernetics, current thinking on evolution and research into computerized artificial life with his own experience of on-line culture to show that industrial culture is now obsolete. This book presents the prospects of imminent revolution as Kelly identifies new frontiers of thinking about biological systems that will change the way the natural world is perceived.

How to leave behind our unwieldy, gas-guzzling, carbon dioxide-emitting vehicles for cars that are green, smart, connected, and fun. This book provides a long-overdue vision for a new automobile era. The cars we drive today follow the same underlying design principles as the Model Ts of a hundred years ago and the tail-finned sedans of fifty years ago. In the twenty-first century, cars are still made for twentieth-century purposes. They are inefficient for providing personal mobility within cities—where most of the world's people now live. In this pathbreaking book, William Mitchell and two industry experts reimagine the automobile, describing vehicles of the near future that are green, smart, connected, and fun to drive. They roll out four big ideas that will make this both feasible and timely. The fundamental reinvention of the automobile won't be easy, but it is an urgent necessity—to make urban mobility more convenient and sustainable, to make cities more livable,

and to help bring the automobile industry out of crisis.

UPDATED FOR 2020 WITH A NEW PREFACE BY NATE SILVER "One of the more momentous books of the decade." —The New York Times Book Review
Nate Silver built an innovative system for predicting baseball performance, predicted the 2008 election within a hair's breadth, and became a national sensation as a blogger—all by the time he was thirty. He solidified his standing as the nation's foremost political forecaster with his near perfect prediction of the 2012 election. Silver is the founder and editor in chief of

the website FiveThirtyEight. Drawing on his own groundbreaking work, Silver examines the world of prediction, investigating how we can distinguish a true signal from a universe of noisy data. Most predictions fail, often at great cost to society, because most of us have a poor understanding of probability and uncertainty. Both experts and laypeople mistake more confident predictions for more accurate ones. But overconfidence is often the reason for failure. If our appreciation of uncertainty improves, our predictions can get better too. This is the "prediction paradox": The more humility we have about our ability to make predictions, the more successful we can be in planning for the future. In keeping with his own aim to seek truth from data, Silver visits the most successful forecasters in a range of areas, from hurricanes to baseball to global pandemics, from the poker table to the stock market, from Capitol Hill to the NBA. He explains and evaluates how these forecasters think and what bonds they share. What lies behind their success? Are they good—or just lucky? What patterns have they unraveled? And are their forecasts really right? He explores unanticipated commonalities and exposes unexpected juxtapositions. And sometimes, it is not so much how good a prediction is in an absolute sense that matters but how good it is relative to the competition. In other cases, prediction is still a very rudimentary—and dangerous—science. Silver observes that the most accurate forecasters tend to have a superior command of probability, and they tend to be both humble and hardworking. They distinguish the predictable from the unpredictable, and they notice a thousand little details that lead them closer to the truth. Because of their appreciation of probability, they can distinguish the signal from the noise. With everything from the health of the global economy to our ability to fight terrorism dependent on the quality of our predictions, Nate Silver's insights are an essential read.
