Seagrasses are unique plants; the only group of flowering plants to recolonise the sea. They occur on every continental margin, except Antarctica, and form ecosystems which have important roles in fisheries, fish nursery grounds, prawn fisheries, habitat diversity and sediment stabilisation. Over the last two decades there has been an explosion of research and information on all aspects of seagrass biology. However the compilation of all this work into one book has not been attempted previously. In this book experts in 26 areas of seagrass biology present their work in chapters which are state-of-the-art and designed to be useful to students and researchers alike. The book not only focuses on what has been discovered but what exciting areas are left to discover. The book is divided into sections on taxonomy, anatomy, reproduction, ecology, physiology, fisheries, management, conservation and landscape ecology. It is destined to become the chosen text on seagrasses for any marine biology course.

In his second book, Adam Carolla—author of New York Times bestseller *In Fifty Years We'll All Be Chicks* and chart-topping podcaster—reveals all the stories behind how he came to be the angry middle-aged man he is today. Funnyman Adam Carolla is known for two things: hilarious rants about things that drive him crazy and personal stories about everything from his hardscrabble childhood to his slacker friends to the hypocrisy of Hollywood. He tackled rants in his first book, and now he tells his best stories and debuts some never-before-heard tales as well.

Organized by the myriad "dumps" Carolla

called home—through the flophouse apartments he rented in his twenties, up to the homes he personally renovated after achieving success in Hollywood—the anecdotes here follow Adam's journey and the hilarious pitfalls along the way. Adam Carolla started broke and blue collar and has now been on the Hollywood scene for over fifteen years, yet he never lost his underdog demeanor. He's still connected to the working class guy he once was, and delivers a raw and edgy, fish-out-of-water take on the world he lives in (but mostly disagrees with), telling all the stories, no matter who he offends—family, friends or the famous.

There is growing recognition of the need to address the fragility of digital information, on which our society heavily depends for smooth operation in all

aspects of daily life. This has been discussed in many books and articles on digital preservation, so why is there a need for yet one more? Because, for the most part, those other publications focus on documents, images and webpages – objects that are normally rendered to be simply displayed by software to a human viewer. Yet there are clearly many more types of digital objects that may need to be preserved, such as databases, scientific data and software itself. David Giaretta, Director of the Alliance for Permanent Access, and his contributors explain why the tools and techniques used for preserving rendered objects are inadequate for all these other types of digital objects, and they provide the concepts, techniques and tools that are needed. The book is structured in three parts. The first part is on theory, i.e., the concepts and techniques that are essential for preserving digitally encoded information. The second part then shows practice, i.e., the use and validation of these tools and techniques. Finally, the third part concludes by addressing how to judge whether money is being well spent, in terms of effectiveness and cost sharing. Various examples of digital objects from many sources are used to explain the tools and techniques presented. The presentation style mainly aims at practitioners in libraries, archives and industry who are either directly responsible for preservation or who need to prepare for audits of their archives. Researchers in digital preservation and developers of preservation tools and techniques will also find valuable practical information here. Researchers creating digitally encoded information of all kinds will also need to be aware of these topics so that they can help to ensure that their data is usable and can be valued by others now and in the future. To further assist the reader, the book is supported by many hours of videos and presentations from the CASPAR project and by a set of open source software.

*Behind the Walls of Terra* Chronicle Books My wife, Jan Durga Ahlund and I have recognised for many years the need for a book that would explain to both those

interested in learning Kriya Yoga and those already embarked on its path, why they should practice it, what are the difficulties, and how to overcome them. We believe that this book will help prepare everyone for the challenges and opportunities that Kriya Yoga provides. Every one of us faces the resistance of our human nature, ignorance as to our true identity, and karma, the consequences of years of conditioning by our thoughts, words and actions. By cultivating aspiration for the Divine, rejecting egoism and its manifestations, and surrendering to our higher Self, pure Witness consciousness, we can overcome this resistance, our karma and the many obstacles on the path. But, to do so, we need much support and insight along the way. -- Marshall Govindan and Jan Ahlund

Aiden From the second I saw her, I knew she'd be my ruin. Sitting all alone at the bar, she looked like an angel. Eurydice in human form; her beauty eclipsed by demons. Now, I'm one of them. The ghost she's tried for years to escape. Thinking I wouldn't be able to find her. But I never stopped trying, and now that I have, her past sins should be the least of her worries. Riley From the moment he saw me, I knew I'd ruin his life. Alone at the bar, I dared the monster to come and play. Orpheus in the flesh, with his sad songs and strange obsessions. I became one of them. The siren who calls to the darkest parts of him. Only, I disappeared before he could act on it. But now he's here, and he wants me to repent for my sins. \*\*\*

\*Vipers and Virtuosos is a full-length, standalone dark rockstar romance inspired by the myth of Orpheus and Eurydice. It is NOT fantasy, historical, or a retelling. If you are not a dark romance reader, this book may not be suitable for you. Reader discretion is advised.

Seventy-five percent of processed foods on supermarket shelves—from soda to soup, crackers to condiments—contain genetically engineered ingredients. The long-term effects of these foods on human health and ecology are still unknown, and public concern has been steadily intensifying. This new book from the Council for Responsible Genetics gathers the best, most thought-provoking essays by the leading scientists, science writers, and public health advocates. Collectively, they address such questions as: Are GM foods safe and healthy for us? Will GM food really solve world hunger? Who really controls the power structure of food production? Are GM foods ecologically safe

and sustainable? Why is it so difficult to get GM foods labeled in the US? What kinds of regulations and policies should be instituted? How is seed biodiversity, of lack thereof, affecting developing countries? Should animals be genetically modified for food? How are other countries handling GM crops? Ultimately, this definitive book encourages us to think about the social, environmental, and moral ramifications of where this particular branch of biotechnology is taking us, and what we should do about it.

'The Germans were over this house last night and the night before that. Here they are again. It is a queer experience, lying in the dark and listening to the zoom of a hornet, which may at any moment sting you to death. It is a sound that interrupts cool and consecutive thinking about peace. Yet it is a sound - far more than prayers and anthems - that should compel one to think about peace. Unless we can think peace into existence we - not this one body in this one bed but millions of bodies yet to be born - will lie in the same darkness and hear the same death rattle overhead.' Throughout history, some books have changed the world. They have transformed the way we see ourselves - and each other. They have inspired debate, dissent, war and revolution. They have enlightened, outraged, provoked and comforted. They have enriched lives - and destroyed them. Now Penguin brings you the works of the great thinkers, pioneers, radicals and visionaries whose ideas shook civilization and helped make us who we are.

In this controversial essay, Carlos Elías addresses the worldwide phenomenon that is threatening the scientific and economic progress of Western countries. The rise and influence of magic and irrationality in the media, in social networks and at universities is a disturbing phenomenon: many Western students no longer want to pursue STEM (Science, Technologies, Engineering, and Math) careers. This lucid and well-written book addresses one of the key issues of public debate: the deteriorating state of science in Western countries and their governments, and its rise in Asian countries. The author compares two distinct models: the Spanish or Latin model, which closed the door on science with the Counter-Reformation, and that employed by a second group of countries where science was encouraged. Elías suggests that a similar development could now be taking place between Western countries (where the press, television and social science academics are becoming increasingly critical towards science) and Asia, where most prime ministers (and other politicians) are scientists or engineers. This book is intended for STEM educators (both at secondary schools and universities), scientists and academics

interested in scientific culture in the era of fake news.

Behind the walls of Terra lay a secret no man could be allowed to learn. But Kickaha - the Earth-born adventurer of the tiered worlds - had to uncover that secret, or watch his home world destroyed. Kickaha was returning to Earth from the World of Tiers, the many-levelled universe of the god-like Lords, that he had entered many years ago as Paul Janus Finnegan. Now he had returned to a world he no longer knew, to find it ruled by Red Orc, a Lord jealous of his personal domain and hostile to intruders. Yet Kickaha had to stay alive in order to defeat the deadly enemy that threatened Earth and the other worlds of tiers - the 'Beller', the malignant creature that was the mind-essence of a rebel Lord.

From the fictional towns of Hill Valley, CA, and Shermer, IL, to the beautiful landscapes of Astoria and Brownsville, OR, from the iconic suburbs of the San Fernando Valley to the seemingly scary inner cities of Chicago, '80s teen movies had one thing in common: locations mattered. Perhaps moreso than in any other decade, the locations of the '80s teen movies were monumentally important. In *Brat Pack America*, Kevin Smokler gives virtual tours of your favorite movies while also picking apart why these locations are so important to these movies. Including interviews with actors,

writers, and directors of the era, and chock full of interesting facts about your favorite 80s movies, *Brat Pack America* is a must for any fan. Smokler went to Goonies Day in Astoria, OR, took a Lost Boys tour of Santa Cruz, CA, and deeply explored every nook and cranny of the movies we all know and love, and it shows

Human computation is a new and evolving research area that centers around harnessing human intelligence to solve computational problems that are beyond the scope of existing Artificial Intelligence (AI) algorithms. With the growth of the Web, human computation systems can now leverage the abilities of an unprecedented number of people via the Web to perform complex computation. There are various genres of human computation applications that exist today. Games with a purpose (e.g., the ESP Game) specifically target online gamers who generate useful data (e.g., image tags) while playing an enjoyable game. Crowdsourcing marketplaces (e.g., Amazon Mechanical Turk) are human computation systems that coordinate workers to perform tasks in exchange for monetary rewards. In identity verification tasks, users perform computation in order to gain access to some online content; an example is reCAPTCHA, which leverages millions of users who solve CAPTCHAs every day to correct words in books that optical character recognition (OCR) programs fail to recognize with certainty. This book is aimed at achieving four goals:

(1) defining human computation as a research area; (2) providing a comprehensive review of existing work; (3) drawing connections to a wide variety of disciplines, including AI, Machine Learning, HCI, Mechanism/Market Design and Psychology, and capturing their unique perspectives on the core research questions in human computation; and (4) suggesting promising research directions for the future.
