When the war ended
 on August 15, 1945, I

was a naval
 engineering cadet at
 the Kure Navy Yard
 near Hiroshima, Japan.
 A week later, I was
 demobilized and
 returned to my home
 in Tokyo, fortunate not
 to find it ravaged by
 firebombing. At the
 beginning of
 September, a large
 contingent of the
 American occupation
 forces led by General
 Douglas MacArthur
 moved its base from
 Yokohama to Tokyo.
 Near my home I
 watched a procession
 of American military
 motor vehicles snaking
 along Highway 1. This
 truly awe-inspiring
 cavalcade included
 jeeps, two-and-a-half-
 ton trucks, and
 enormous trailers
 mounted with tanks
 and artillery. At the
 time, I was a 21-year-
 old student in the

Machinery Section of Engineering at the Tokyo Imperial University. Watching that magnificent parade of military vehicles, I was more than impressed by the gap in industrial strength between Japan and the U. S. That realization led me to devote my whole life to the development of the Japanese auto industry. I wrote a small article concerning this incident in Nikkei Sangyo Shimbun (one of the leading business newspapers in Japan) on May 2, 1983. The English translation of this story was carried in the July 3, 1983 edition of the Topeka Capital-Journal and the September 13, 1983 issue of the Asian Wall Street Journal. The Topeka Capital-Journal

headline read, "MacArthur's Jeeps Were the Toyota Catalyst. *Event Data Recorders* John Wiley & Sons The engineering enterprise is a pillar of U.S. national and homeland security, economic vitality, and innovation. But many engineering tasks can now be performed anywhere in the world. The emergence of "offshoring"- the transfer of work from the United States to affiliated and unaffiliated entities abroad - has raised concerns about the impacts of globalization. The Offshoring of Engineering helps to answer many questions about the scope, composition, and motivation for offshoring and

considers the implications for the future of U.S. engineering practice, labor markets, education, and research. This book examines trends and impacts from a broad perspective and in six specific industries - software, semiconductors, personal computer manufacturing, construction engineering and services, automobiles, and pharmaceuticals. The Offshoring of Engineering will be of great interest to engineers, engineering professors and deans, and policy makers, as well as people outside the engineering community who are concerned with sustaining and strengthening U.S. engineering

capabilities in support of homeland security, economic vitality, and innovation.

'Automotive Computer Controlled Systems' explains the fundamental principles of engineering that lie behind the operation of vehicle electronic systems. Having obtained this

knowledge, the reader will be able to make full use of the diagnostic equipment which is currently available. The book builds on the concepts contained in Vehicle Electronic Systems and Fault Diagnosis and gives clear steps to fault diagnosis and subsequent repair of the vehicle's electronic systems. The author discusses electronics only within the context of the vehicle systems under consideration, and thus keeps theory to a minimum. Allan Bonnick has written articles for several transport/vehicle journals and carries out consultancy work for the Institute of Road Transport Engineers. In addition, he has had many years teaching experience and is ideally placed to write
