Birds of Senegal and The Gambia
Princeton University Press
It's estimated that 50 to 60 million Americans count birding among their hobbies. Some hang feeders in their backyards and accumulate yard lists; others participate in annual Christmas Counts; a select few travel to the ends of the earth in an effort to see every bird in the world. With *Fifty Places to Go Birding Before You Die*, Chris Santella takes the best-selling *Fifty Places* recipe and applies it to this most popular pastime. Santella presents some of the greatest bird-watching venues in the United States and abroad through interviews with prominent birders, from tour leaders and conservationists to ornithologists and academics. Interviewees include ornithologist Kenn Kaufman; David Allen Sibley, author and illustrator of *The Sibley Guide to Birds*; Rose Ann Rowlett, the mother of modern birding; John Fitzpatrick,

director of the Cornell Lab of Ornithology; and Steve McCormick, president and CEO of The Nature Conservancy. The places vary from the urban (New York City's Central Park) to the mystical (the cloud forests of Triunfo in Chiapas, Mexico) to the extremely remote (the sub-Arctic islands of New Zealand). The book includes 40 gorgeous photographs that capture the vibrancy of our feathered friends, and the beautiful places they call home.

A Mystery No More Elsevier

An illustrated survey of the world's most endangered birds This illustrated book vividly depicts the most endangered birds in the world and provides the latest information on the threats each species faces and the measures being taken to save them. Today, 571 bird species are classified as critically endangered or endangered, and a further four now exist only in captivity. This landmark book features stunning photographs of 500 of these species—the results of a prestigious international photographic competition organized specifically for this book. It also showcases paintings by

acclaimed wildlife artist Tomasz Cofta of the 75 species for which no photos are known to exist. *The World's Rarest Birds* has introductory chapters that explain the threats to birds, the ways threat categories are applied, and the distinction between threat and rarity. The book is divided into seven regional sections—Europe and the Middle East; Africa and Madagascar; Asia; Australasia; Oceanic Islands; North America, Central America, and the Caribbean; and South America. Each section includes an illustrated directory to the bird species under threat there, and gives a concise description of distribution, status, population, key threats, and conservation needs. This one-of-a-kind book also provides coverage of 62 data-deficient species.

Birds of the Indian Ocean Islands A&C Black

Urban Raptors is the first book to offer a complete overview of urban ecosystems in the context of bird-of-prey ecology and conservation. This comprehensive volume examines the urban environment, explains why some species adapt to urban areas but others do not, and introduces modern research tools to help in the study of urban raptors. It delves into climate change adaptation, human-wildlife conflict, and the unique risks birds of prey face in urban areas before concluding with real-world wildlife management case studies and suggestions for future research and conservation efforts. Among researchers, urban green space planners, wildlife management agencies, birders, and informed citizens alike, *Urban Raptors* will foster a greater understanding of birds of prey and an increased willingness to accommodate them as important members, not intruders, of our cities.

Birds of Southeastern Madagascar

Bloomsbury Publishing

The Malagasy region contains one of the most extraordinary concentrations of biodiversity in the world. Its recognition as a zoogeographic region in its own right has recently been confirmed and, all taxa combined, the region was found to hold the second most distinct assemblage of vertebrates in the world after the Australian region, despite being the smallest of them all. This new field guide in the Helm Field Guides series covers the whole of the Malagasy region, which comprises the unique island of Madagascar and the various islands and archipelagos of the Indian Ocean including the Seychelles, Comoros and Mascarenes (Mauritius, Réunion and Rodrigues). Every resident and migrant species is covered in full detail with a colour distribution map for each species. Vagrants are also treated in detail, but without maps. All species are illustrated on a beautiful series of 124 colour plates, with artwork from John Gale and Brian Small. Conveniently, the plates have been arranged so that all the key species of the various archipelagos are placed together in sections. This is a major work of reference on the birds of the region and will remain the standard text for many years to come.

The New Natural History of Madagascar

Simon and Schuster

When Private gets kidnapped, it's up to the other penguins to save him from the evil Dr. Octavius Brine, who wants to steal the cuteness from all the penguins of the world.

The Endemic Birds of Madagascar

Princeton University Press

The Middle East has a wonderfully broad and diverse avifauna, featuring a host of wintering and passage migrants, enigmatic and sometimes colourful

breeders, and even a few endemics that occur nowhere else. The perfect companion for any wildlife-friendly visitor, *Birds of the Middle East* provides photographic coverage of more than 320 species that regularly occur in the region. Concise text for each species includes information on identification, songs and calls, behaviour, distribution and habitat, with each photo having been carefully selected to guide identification. A guide to the best birdwatching sites in the Middle East is also included. Portable yet authoritative, this is the perfect guide for travellers and birdwatchers visiting this spectacular and bird-rich slice of western Asia.

Penguins of Madagascar Movie Novelization Yale University Press

"Universally recognised as by far the most authoritative work ever published on the subject, *The Birds of Africa* is a superb multi-contributor reference work, with encyclopaedic species texts, stunning paintings of all species and numerous subspecies, hundreds of informative line drawings, detailed range maps, and extensive bibliographies. This eighth and final volume covers the Malagasy region which comprises Madagascar and the various islands and archipelagos of the Indian Ocean including the Seychelles, the Comoros, Mauritius and Réunion. Every resident and migrant species is covered in full detail, comparable to other volumes in the series, and with a colour map for each species. Vagrants are treated in less detail. All species are illustrated on a beautiful series of 64 colour plates, with original artwork from John Gale and Brian Small."--Bloomsbury Publishing
Rare Birds of North America Island Press

Features over 700 species of

Madagascar's amphibians and reptiles plus coverage of the island's flora, invertebrates, freshwater fishes, and birds. Individual species accounts provide the biology and description of all Malagasy amphibians and reptiles. Illustrated with over 1500 color photographs, range maps, illustrated ID keys, and extensive bibliography.

The World's Rarest Birds Bloomsbury Publishing

The landscapes of Madagascar have long delighted zoologists, who have discovered, in and among the island's baobab trees and thickets, a dizzying array of animals, including something approaching one hundred species of lemur. Madagascar's mammal fauna, for example, is far more diverse, and more endemic, than early explorers and naturalists ever dreamed of. But in the past 2,500 or so years—a period associated with natural climatic shifts and ecological change, as well as partially coinciding with the arrival of the island's first human settlers—a considerable proportion of Madagascar's forests have disappeared; and in the wake of this loss, a number of species unique to Madagascar have vanished forever into extinction. In *Extinct Madagascar*, noted scientists Steven M. Goodman and William L. Jungers explore the recent past of these land animal extinctions. Beginning with an introduction to the geologic and ecological history of Madagascar that provides context for the evolution, diversification, and, in some cases, rapid decline of the Malagasy fauna, Goodman and Jungers then seek to recapture these extinct mammals in their environs. Aided in their quest by artist Velizar Simeonovski's beautiful and haunting digital paintings—images of both individual species and ecosystem

assemblages reproduced here in full color—Goodman and Jungers reconstruct the lives of these lost animals and trace their relationships to those still living. Published in conjunction with an exhibition of Simeonovski's artwork set to open at the Field Museum, Chicago, in the fall of 2014, Goodman and Jungers's awe-inspiring book will serve not only as a sobering reminder of the very real threat of extinction, but also as a stunning tribute to Madagascar's biodiversity and a catalyst for further research and conservation.

The Song Of The Dodo New Holland Australia(AU)

Updated for the first time in decades, this unparalleled reference work is the most comprehensive and authoritative guide to the birds of North America and now includes the latest information on conservation status and the effects of climate change--from the world's most trusted name in birding, beloved by millions of backyard enthusiasts and experts alike "If you've ever wondered what birds show up in your backyard or which species you see when your family is on vacation, then this beautiful, freshly updated bird guide from the National Audubon Society is perfect for you." —Portland Book Review Developed by the creators of the best-selling Audubon field guides, this handsome volume is the result of a collaboration among leading scientists, scholars, taxonomic and field experts, photo editors, and designers. An indispensable reference, it covers more than 800 species, with over 3,500 full-color photographs of birds in their natural habitat, often with four or five images of each species. For ease of use, the book includes a glossary, an index, and a ribbon marker, and is arranged according to the American Ornithological

Society's latest Checklist of North and Middle American Birds—with birds sorted by taxonomic orders and grouped by family, so that related species are presented together. Range maps, reflecting the impact of climate change, accompany nearly every entry, along with a physical description and information on voice, nesting, habitat, and similar species. This guide also includes an important new category on conservation status and essays by leading scholars in each field who provide holistic insights into the world of birds. Whether trying to determine which owl is interrupting your dinner or successfully identifying all of the warblers that arrive in spring, readers will come to rely on this work of remarkable breadth, depth, and elegance. It is a must-have reference for the library of any birder, and is poised to become the number one guide in the field.

A Photographic Guide to Birds of the Indian Ocean Islands Random House
A marvelously illustrated reference to the natural wonders of one of the most spectacular places on earth Separated from Africa's mainland for tens of millions of years, Madagascar has evolved a breathtaking wealth of biodiversity, becoming home to thousands of species found nowhere else on the planet. The New Natural History of Madagascar provides the most comprehensive, up-to-date synthesis available of this island nation's priceless biological treasures. Now fully revised and expanded, this beautifully illustrated compendium features contributions by more than 600 globally renowned experts who cover the history of scientific exploration in Madagascar, as well as the island's geology and soils, climate, forest ecology, human ecology,

marine and coastal ecosystems, plants, invertebrates, fishes, amphibians, reptiles, birds, and mammals. This invaluable two-volume reference also includes detailed discussions of conservation efforts in Madagascar that showcase several successful protected area programs that can serve as models for threatened ecosystems throughout the world. Provides the most comprehensive overview of Madagascar's rich natural history Coedited by 18 different specialists Features hundreds of new contributions by world-class experts Includes hundreds of new illustrations Covers a broad array of topics, from geology and climate to animals, plants, and marine life Sheds light on newly discovered species and draws on the latest science An essential resource for anyone interested in Madagascar or tropical ecosystems in general, from biologists and conservationists to ecotourists and armchair naturalists

Birds of Madagascar Bloomsbury Publishing

This spectacular new edition of the best-selling Helm field guide of all time covers all resident, migrant and vagrant species found in Kenya, Tanzania, Uganda, Rwanda and Burundi. Over 1,300 species are illustrated with full details of all the plumages and major races likely to be encountered. Concise text describes the identification, status, range, habits and voice, with fully updated range maps for each species. This authoritative book will not only be an indispensable guide to the visiting birder, but also a vital tool for those engaged in work to conserve and study the avifauna of the region - East Africa shelters a remarkable diversity of birds, many seriously endangered with small and vulnerable ranges.

Birds of Seychelles Bloomsbury Publishing

Madagascar, isolated for at least 120 million years and the fourth largest island in the world, is home to a remarkable variety of endemic animals and plants. This book is a guide to the unusual bird life of Madagascar. 40 watercolour illustrations provide clear and easy identification of all the Malagasy birds.

Where to Watch Birds in Africa Royal Botanic Gardens Kew

Previous edition by Bruce M. Beehler, Thane K. Pratt, and Dale A. Zimmerman.

Birds of the Indian Ocean Islands Bloomsbury Publishing

This compact field guide, based on *Birds of Seychelles* by Adrian Skerrett, Ian Bullock and Tony Disley (Helm 2000), is the only field guide to cover every species recorded in Seychelles. It covers more than 250 species, including all residents, migrants and vagrants. Concise text on facing pages highlights key identification features, including habitat, distribution, status and voice. The plates are based on the authors' previous work, but with the addition on many new images. The text has been completely re-written and revised for this edition, and the plates are been re-worked to accommodate a number of new additions to the country's list. There are now 12 more plates than in the first edition.

Palaeobiology of Giant Flightless Birds University of Chicago Press

Where to Watch Birds in Africa is a field guide designed to help birders and general wildlife enthusiasts organize the most enriching trips possible throughout this great continent. From Morocco to Madagascar, this book presents over 200 bird-watching sites in detail and describes the species endemic to Africa.

The traveler will find practical information on climate, transportation, accommodations, health, and safety as well as advice on a number of strategic questions: Where can we see birds that epitomize the continent? Which country supports the best cross-section of species and the most endemics? How many sites must be visited to see most of these birds? How much time do these trips take and when is the best time to go? Featuring over one hundred maps and fifty-one line drawings, this book is not only a guide but also a handy reference. Following a chapter on how to use the book, there is an introduction to the continent and its birds. The countries, archipelagos, and islands are then dealt with alphabetically. General introductions to each country are followed by site details, which include bird lists; a list of other wildlife present, if applicable; and the latest information on where to look for the best birds. Originally published in 1995. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

Notes on the Birds-of-prey of Madagascar and Some Adjacent Islands
Abrams

The most comprehensive single-volume field guide to Madagascar's wildlife The Indian Ocean island of Madagascar is one of the world's great natural

treasures and ecotourism destinations. Despite being an island, it is home to nearly an entire continent's variety of species, from the famous lemurs to a profusion of bizarre and beautiful birds, reptiles and amphibians. Wildlife of Madagascar is a compact and beautifully illustrated photographic guide, and an essential companion for any visitor or resident. With an eye-catching design, authoritative and accessible text and easy-to-use format, it provides information on identification, distribution, habitat, behaviour, biology and conservation for all the mammals, birds, reptiles, amphibians and butterflies likely to be seen. The most comprehensive single-volume field guide to Madagascar's wildlife Attractive layout features more than 900 stunning colour photographs Covers the mammals, birds, reptiles, amphibians and butterflies, and some of the other invertebrates and plants, most likely to be seen Provides key information about identification, distribution, habitat, behaviour and conservation Introductory sections provide background information on Madagascar and its unique environments

Urban Raptors Elsevier

With its unique blend of Western Palearctic, Oriental and Afrotropical components, and lying on a migratory crossroads, Oman is a jewel of the Middle East. This is the first comprehensive field guide to the birds of this fascinating and welcoming country. All 528 species on the Oman Bird List are featured on the 116 colour plates, illustrating many of the distinct plumages and races, plus a few non-naturalised escapes. Species accounts cover key identification features - including habitat and voice - with colour maps showing the breeding, wintering and migration distributions for all

regularly occurring species.

The Birds of Africa: Volume VIII

Princeton University Press

The first comprehensive illustrated guide to North America's vagrant birds Rare Birds of North America is the first comprehensive illustrated guide to the vagrant birds that occur throughout the United States and Canada. Featuring 275 stunning color plates, this book covers 262 species originating from three very different regions—the Old World, the New World tropics, and the world's oceans. It explains the causes of avian vagrancy and breaks down patterns of occurrence by region and season, enabling readers to see where, when, and why each species occurs in North America. Detailed species accounts describe key identification features, taxonomy, age, sex, distribution, and status. Rare Birds of North America provides unparalleled insights into vagrancy and avian migration, and will enrich the birding experience of anyone interested in finding and observing rare birds. Covers 262 species of vagrant birds found in the United States and Canada Features 275 stunning color plates that depict every species Explains

patterns of occurrence by region and season Provides an invaluable overview of vagrancy patterns and migration Includes detailed species accounts and cutting-edge identification tips

A History of the Birds of Europe

National Geographic Books

In the forests of Madagascar, about nine-tenths of the plant and animal species are unique to the island. Their natural habitats range from true rainforest to the lunar landscape of the spiny desert, and the natural rock-gardens of the mountain tops. Madagascar is no oceanic island, but a fragment of continent a thousand miles long, wrenched loose from the side of Africa. In this Lost World, plants and animals have become a living museum of evolution. Aepornis, the largest bird which ever lived, became extinct on Madagascar in the last few hundred years. Many more Malagasy species are now following Aerpornis into extinction. This volume introduces Madagascar's unique fauna and flora to general readers - the first such handbook available in English, and the first book to combine articles by Malagasy, French, English and American scientists, writing in their own fields of expertise.
