Ovid's magnificent panorama of the Greek and Roman myths-presented by a noted poet, scholar, and critic. Prized through the ages for its splendor and its savage, sophisticated wit, *The Metamorphoses* is a masterpiece of Western culture-the first attempt to link all the Greek myths, before and after Homer, in a cohesive whole, to the Roman myths of Ovid's day. Horace Gregory, in this modern translation, turns his own poetic gifts toward a deft reconstruction of Ovid's ancient themes, using contemporary idiom to bring to today's reader all the ageless drama and psychological truths vividly intact.

Plessner (1892-1985), a onetime student of Husserl and contemporary of Heidegger, achieved recognition as a German social philosopher who helped establish philosophical anthropology as a discipline in the post-World War II decades. Anticipating the rise of German fascism in *The Limits of Community* (1924), he presents the appeal and dangers of rejecting modern society for the sake of a political ideal-based community. Translator Wallace (philosophy, Sonoma State U., California) provides a balanced introduction to Plessner's Max Weber-influenced ideas. The volume lacks an index. How can an understanding of theatre in the city help us make sense of urban social experience? *Theatre& the City* explores how relationships between theatre, performance and the city affect social power dynamics, ideologies and people's sense of identity. The book evaluates both material conditions (such as architecture) and performative practices (such as urban activism) to argue that both these categories contribute to the complex economies and ecologies of theatre and performance in an increasingly urbanised world. Foreword by Tim Etchells.

The Ancient Greek Grammar for the Study of the New Testament is a tool for theologians and others interested in interpreting the Greek New Testament. It is a reference grammar that systematically covers all areas relevant to well-founded text interpretation including textgrammar. Combining accuracy with accessibility was one of the main objectives in producing the book. The information it provides is based on the best of traditional and more recent research in the study of Ancient Greek and linguistic communication. Differences between classical and non-classical usage are regularly indicated. The mode of presentation is largely shaped by the needs of prospective users, who are typically unacquainted with the details of linguistic research. Aiming at both a professional quality of content and user-friendly presentation, a tool was produced that aims to be of service to novices and more experienced exegetes alike.

What do our assumptions about authorship matter for our experience of meaning? This book examines the debates in the humanities and social sciences over whether authorial intentions can, or should, constrain our interpretation of language and art. Scholars assume that understanding of linguistic and artistic meaning should not be constrained by beliefs about authors and their possible intentions in creating a human artifact. It is argued here that people are strongly disposed

to infer intentionality when understanding oral speech, written texts, artworks, and many other human actions. Although ordinary people, and scholars, may infer meanings that diverge from, or extend beyond, what authors intend, our experience of human artifacts as meaningful is fundamentally tied to our assumptions of intentionality. This challenges the traditional ideas of intentions as existing solely in the minds of individuals, and formulates a new conceptual framework for examining if and when intentions influence the interpretation of meaning.

Convergence has gained an enormous amount of attention in media studies within the last several years. It is used to describe the merging of formerly distinct functions, markets and fields of application, which has changed the way companies operate and consumers perceive and process media content. These transformations have not only led business practices to change and required companies to adapt to new conditions, they also continue to have a lasting impact on research in this area. This book's main purpose is to shed some light on crucial phenomena of media and convergence management, while also addressing more specific issues brought about by innovations related to media, technologies, industries, business models, consumer behavior and content management. This book gathers insights from renowned academic researchers and pursues a highly interdisciplinary approach. It will serve as a valuable reference guide for students, practitioners and researchers interested in media convergence processes.

Most of us want to make a difference. We donate our time and money to charities and causes we deem worthy, choose careers we consider meaningful, and patronize businesses and buy products we believe make the world a better place. Unfortunately, we often base these decisions on assumptions and emotions rather than facts. As a result, even our best intentions often lead to ineffective—and sometimes downright harmful—outcomes. How can we do better? While a researcher at Oxford, trying to figure out which career would allow him to have the greatest impact, William MacAskill confronted this problem head on. He discovered that much of the

potential for change was being squandered by lack of information, bad data, and our own prejudice. As an antidote, he and his colleagues developed effective altruism, a practical, data-driven approach that allows each of us to make a tremendous difference regardless of our resources. Effective altruists believe that it's not enough to simply do good; we must do good better. At the core of this philosophy are five key questions that help guide our altruistic decisions: How many people benefit, and by how much? Is this the most effective thing I can do? Is this area neglected? What would have happened otherwise? What are the chances of success, and how good would success be? By applying these questions to real-life scenarios, MacAskill shows how many of our assumptions about doing good are misguided. For instance, he argues one can potentially save more lives by becoming a plastic surgeon rather than a heart surgeon; measuring overhead costs is an inaccurate gauge of a charity's effectiveness; and, it generally doesn't make sense for individuals to donate to disaster relief. MacAskill urges us to think differently, set aside biases, and use evidence and careful reasoning rather than act on impulse. When we do this—when we apply the head and the heart to each of our altruistic endeavors—we find that each of us has the power to do an astonishing amount of good.

The aim of this volume is to assess Friedrich Schleiermacher's contribution to the theory of translation two centuries after his address "On the Different Methods of Translating" at the Academy of Sciences in Berlin, and to explore its potential for generating future innovative work. For the first time this classic text forms the object of a focused, interdisciplinary approach. Scholars of philosophy and translation, working in English, French and German, provide a close reading of Schleiermacher's lecture and combine their efforts in order to highlight the fundamental role translation plays in his hermeneutic thinking and the importance of hermeneutics for his theorisation of translation, within the historical and literary context of Romanticism. The various contributions revisit key concepts in Schleiermacher's thought, in particular the famous metaphor of movement; examine the relation between his theoretical writings and his practice as translator of Plato, unearthing some of their philosophical and linguistic implications; discuss Schleiermacher's reception in Germany and abroad; and assess the relevance of his ideas in the beginning of the 21st century as well as their potential to inspire further research in translation and interpreting.

*Four Decades of Research in Science Education - from Curriculum Development to Quality Improvement* Penguin

This is the fifth revised edition of the best-selling *A Practical Guide for Translators*. It looks at the profession of translator on the basis of developments over the last few years and encourages both practitioners and buyers of translation services to view translation as a highly-qualified, skilled profession and not just a cost-led word mill. The book is intended principally for those who have little or no practical experience of translation in a commercial environment. It offers comprehensive advice on all aspects relevant to the would-be translator and, whilst intended mainly for those who wish to go freelance, it is also relevant to the staff translator as a guide to organisation of work and time. Advice is given on how to set up as a translator, from the purchase

of equipment to the acquisition of clients. The process of translation is discussed from initial enquiry to delivery of the finished product. Hints are given on how to assess requirements, how to charge for work, how to research and use source material, and how to present the finished product. Guidance is given on where to obtain further advice and professional contacts. This revised edition updates practices in the translation profession and considers the impact of web-based translation offerings. Industry and commerce rely heavily on the skills of the human translator and his ability to make intellectual decisions that is, as yet, beyond the capacity of computer-aided translation.
