Los Angeles magazine is a regional magazine of national stature. Our combination of award-winning feature writing, investigative reporting, service journalism, and design covers the people, lifestyle, culture, entertainment, fashion, art and architecture, and news that define Southern California. Started in the spring of 1961, Los Angeles magazine has been addressing the needs and interests of our region for 48 years. The magazine continues to be the definitive resource for an affluent population that is intensely interested in a lifestyle that is uniquely Southern Californian.

*Beyond Representational Correctness* University of Chicago Press

The origin of life is a hotly debated topic. The Christian Bible states that God created the heavens and the Earth, all in about seven days roughly six thousand years ago. This episode in Genesis departs markedly from scientific theories developed over the last two centuries which hold that life appeared on Earth about 3.5 billion years ago in the form of bacteria, followed by unicellular organisms half a millennia later. It is this version of genesis that Alexandre Meinesz explores in this engaging tale of life's origins and evolution. How Life Began elucidates three origins, or geneses, of life—bacteria, nucleated cells, and multicellular organisms—and shows how evolution has sculpted life to its current biodiversity through four main events—mutation, recombination, natural selection, and geologic cataclysm. As an ecologist who specializes in algae, the first organisms to colonize Earth, Meinesz brings a refreshingly novel voice to the history of biodiversity and emphasizes here the role of unions in organizing life. For example, the ingestion of some bacteria by other bacteria led to mitochondria that characterize animal and plant cells, and the chloroplasts of plant cells. As Meinesz charmingly recounts, life’s grandeur is a result of an evolutionary tendency toward sociality and solidarity. He suggests that it is our cohesion and collaboration that allows us to solve the environmental problems arising in the decades and centuries to come. Rooted in the science of evolution but enlivened with many illustrations from other disciplines and the arts, How Life Began intertwines the rise of bacteria and multicellular life with Vermeer’s portrait of Antoni van Leeuwenhoek, the story of Genesis and Noah, Meinesz’s son’s early experiences with Legos, and his own encounters with other scientists. All of this brings a very human and humanistic tone to Meinesz’s charismatic narrative of the three origins of life.

Entertainment, media and the law : text, cases, problems.

**Livres de France** Penguin

"But somewhere along the line, the beast they awakened took on a life of its own, and by the 1990s production budgets had escalated as quickly as profits. Hollywood entered a topsy-turvy world ruled by marketing and merchandising mavens, in which flops like Godzilla made money and hits had to break records just to break even. The blockbuster changed from a major event that took place a few times a year into something that audiences have come to expect weekly, piling into the backs of one another in an annual demolition derby that has left even Hollywood aghast."

EBOOK: Marketing: The Core

**Chicago Tribune Index** Editeur Dreamland

Is a loved one missing some body parts? Are blondes becoming extinct? Is everyone at your dinner table of the same species? Humans and chimpanzees differ in only 400 genes; is that why a chimp fetus resembles a human being? And should that worry us? There's a new genetic cure for drug addiction—is it worse than the disease? We live in a time of momentous scientific leaps, a time when it's possible to sell our eggs and sperm online for thousands of dollars and to test our spouses for genetic maladies. We live in a time when one fifth of all our genes are owned by someone else, and an unsuspecting person and his family can be pursued cross-country because they happen to have certain valuable genes within their chromosomes . . . Devilishly clever, Next blends fact and fiction into a breathless tale of a new world where nothing is what it seems and a set of new possibilities can open at every turn. Next challenges our sense of reality and notions of morality. Balancing the comic and the bizarre with the genuinely frightening and disturbing, Next shatters our assumptions and reveals shocking new choices where we least expect. The future is closer than you think.

**Handbook of Palaeodemography** Ballantine Books

Si un metteur en scène pouvait à lui seul symboliser une certaine idée du cinéma fantastique, ce serait sans nul doute John Carpenter. En réalisant des chefs-d'œuvre qui ont marqué de façon indélébile le genre (Halloween, the Thing, L'Antre de la folie ou encore Escape from L.A.). Carpenter a établi depuis son premier film, Dark Star, un pacte particulièrement prolifique avec le cinéma de la peur. Cinéaste subversif hanté par le double spectre du western et du cinéma fantastique, John Carpenter s'est imposé au fil de ses seize films comme le digne et tenace représentant d'un genre qu'il n'a cessé de questionner. Mais en dépit de son statut indiscutable d'auteur majeur du cinéma américain contemporain, ses films n'ont que rarement fait l'objet d'études sérieuses. Ce manque justifie en partie l'existence de ce livre qui propose, en trois parties, une vision analytique, donc forcément subjective de son œuvre. A travers une longue conversation avec John Carpenter et des analyses de ses films comme de ses thèmes les plus récurrents, ce livre tente d'éclairer la lanterne d'un univers marqué par une admiration sans bornes pour le cinéma de genre et les grands

metteurs en scène classiques. L'antre cinématographique de John Carpenter révèle enfin une vision du monde peuplée de leurres et de fantômes, de mythes et de masques.

Argues that representational correctness can cause critics to miss the positive work that films and television shows can perform in reducing prejudice.

*Mythes et masques* Simon and Schuster

This analysis of images of science and technology from popular films of the 1980s and 1990s argues that films as diverse as the science fiction film Jurassic Park contribute to popular understandings of science and technology.

*Entertainment, Media, and the Law* SIU Press

Beginning with celebrated classics, the author locates King Kong (1933) within the era of lynching to evince how the film protects whiteness against supposed aggressions of a black predator and reviews The Wizard of Oz (1939) as a product of the Depression's economic anxieties. From there, the study moves to the cult classic animated Sinbad Trilogy (1958-1977) of Ray Harryhausen, films rampant with xenophobic fears of the Middle East as relevant today as when the series was originally produced. Advancing to more recent subjects, the author focuses on the image of the monstrous woman and the threat of reproductive freedom found in Aliens (1986), Jurassic Park (1993), and Species (1995) and on depictions of the mentally ill as dangerous deviants in 12 Monkeys (1996) and The Cell (2000). An investigation into physical freakishness guides his approach to Edward Scissorhands (1990) and Beauty and the Beast (1991).

**Nationalism and the Cinema in France** Harper Collins

"For thirty-two years archaeologist Julius Gabriel has investigated the Mayan calendar, a 2500-year-old enigma of time and space that predicts humanity will perish at the winter solstice of 2012. Julius believes the Great Pyramid of Giza, Stonehenge, the desert drawings of Nazca, the sites of Angor Wat, Teotihuacan, and the Kukulcan Pyramid in the Yucatan Peninsula, the site of the ancient asteroid impact, all represent ancient pieces of a global puzzle linked to the salvation of our species."--Jacket.

**Panorama** Indiana University Press

En 1984, des chercheurs isolent les tout premiers fragments d'ADN fossile, à partir de momies égyptiennes et d'un animal empaillé. Et se prennent alors à rêver d'ADN de dinosaures. Ce rêve, dont le film Jurassic Park s'est fait l'écho, ne s'est pas réalisé. Mais pour autant, l'ADN fossile a emmené les chercheurs vers d'autres destinations tout aussi passionnantes. Grâce aux ossements, aux sédiments et même aux crottes fossiles, l'ADN ancien permet désormais de remonter le temps et de faire parler ceux qui ne sont plus là. Il livre ses secrets précieux aux historiens, aux paléontologues et aux anthropologues : plusieurs énigmes historiques et scientifiques ont ainsi été récemment résolues. Il aide à comprendre ce qui conduit les espèces vers l'extinction et à anticiper les désastres que pourrait entraîner le réchauffement climatique déjà amorcé. Ou bien encore à démasquer les fabricants d'armes bactériologiques ou à trouver des parades contre certains virus émergents. Autant d'histoires que ce livre raconte de manière simple et vivante.

**Reconnaisant la Heure de Fin** Fayard

Présente la vie et l'oeuvre de ce réalisateur consacré auprès du public du monde entier, qui a réalisé, entre autres, Jurassik Park, Les dents de la mer, ET l'extraterrestre et La liste de Schindler. L'auteur montre les qualités professionnelles de Spielberg, qui tente toujours de s'adresser directement au spectateur moyen, en privilégiant l'image pour transmettre l'émotion.

*Le Point* Hachette Heroes

It is often taken for granted that French cinema is intimately connected to the nation's sense of identity and self-confidence. But what do we really know about that relationship? What are the nuances, insider codes, and hidden history of the alignment between cinema and nationalism? Hugo Frey suggests that the concepts of the 'political myth' and 'the film event' are the essential theoretical reference points for unlocking film history. Nationalism and the Cinema in France offers new arguments regarding those connections in the French case, examining national elitism, neo-colonialism, and other exclusionary discourses, as well as discussing for the first time the subculture of cinema around the extreme right Front National. Key works from directors such as Michel Audiard, Jean-Luc Godard, Jean-Pierre Melville, Marcel Pagnol, Jean Renoir, Jacques Tati, François Truffaut, and others provide a rich body of evidence.

*Dinosaurs of Distinction* Manchester University Press

New York Times bestselling author Michael Crichton delivers another action-packed techno-thriller in State of Fear. When a group of eco-terrorists engage in a global conspiracy to generate weather-related natural disasters, its up to environmental lawyer Peter Evans and his team to uncover the subterfuge. From Tokyo to Los Angeles, from Antarctica to the Solomon Islands, Michael Crichton mixes cutting edge science and action-packed adventure, leading readers on an edge-of-your-seat ride while offering up a thought-provoking commentary on the issue of global warming. A deftly-crafted novel, in true Crichton style, State of Fear is an exciting, stunning tale that not only entertains and educates, but will make you think.
