This book examines the youth sport parent experience through the lens of social capital, a cornerstone social science concept of the past 30 years. Social capital reflects the value of one's social networks, and the actual and potential benefits – and costs – of relationships. Bringing together a team of kids for a season also brings together their families who all must negotiate this new social world. Within this world, relationships are bound to form, and these are the foundation upon which this project rests. Youth sport scholars

have traditionally been interested in questions such as: how many kids play sports, what sports they play, how and why do they start playing and stop playing, and the costs and benefit of participation. However, aside from sensational examples of youth sport parents behaving badly, scholars know far less about the parental experience. This time is meaningful for parents, because parents often spend as much or even more time at the fields than their children. It is thus worth examining what they might get out of this investment. Utilizing two years of fieldwork and over 30 interviews with parents and board members of a youth baseball league in the southwestern United States, this book provides an inside look at the beneficial relationships that

can be found in the bleachers of a kids' baseball game, as well as the unseen, high-stakes games waged in the boardroom, where relationships can carry heavy costs as well. This book was originally published as a special issue of *Sport in Society*.

In contrast to the great diversity of other

crime and delinquency research measures, those drawn from the CPI and the MMPI have much in common. They are taken from standardized instruments administered under controlled conditions, with known stimulus properties and validity indicators. The CPI and MMPI measures will frequently be instruments of choice in research on personality and psychodynamics of offenders. CHAPTER 6 Law Enforcement and Police This chapter encompasses a variety of scales that refer to law enforcement or police agencies. Unfortunately, in the case of many scales, these terms are used simply with the assumption that the respondents understand the concepts and use them in the same way as researchers. In other cases, however, specific policing functions are identified and described. As noted in Chapter 3, a standard order of scale presentation is followed. First the attitudes scales are presented, followed by the behavior ratings, personality measures, milieu ratings, prediction measures and finally the very broad category of description. After the reviews are completed within each subcategory, other scales in that category are listed. (See

Chapter 2 for a description of the criteria that were used in deciding upon whether a scale would be reviewed or simply listed.) Listed scales are presented by title and bibliographic reference, followed by a very brief description.

One of Fuller's most popular works, Operating Manual for Spaceship Earth, is a brilliant synthesis of his world view. In this very accessible volume, Fuller investigates the great challenges facing humanity. How will humanity survive? How does automation influence individualization? How can we utilize our resources more effectively to realize our potential to end poverty in this generation? He questions the concept of specialization, calls for a design revolution of innovation, and offers advice on how to guide "spaceship earth" toward a sustainable future.
