The Idea of Nature in Disney Animation, David Whitley updates his 2008 book to reflect recent developments in Disney and Disney-Pixar animation such as the apocalyptic tale of earth's failed ecosystem, WALL-E. As Whitley has shown, and Disney's newest films continue to demonstrate, the messages animated films convey about the natural world are of crucial importance to their child viewers. Beginning with *Snow White*, Whitley examines a wide range of Disney's feature animations, in which images of wild nature are central to the narrative. He challenges the notion that the sentimentality of the Disney aesthetic, an oft-criticized aspect of such films as *Bambi*, *The Jungle Book*, *Pocahontas*, *Beauty and the Beast*, and

Finding Nemo, necessarily prevents audiences from developing a critical awareness of contested environmental issues. On the contrary, even as the films communicate the central ideologies of the times in which they were produced, they also express the ambiguities and tensions that underlie these dominant values. In distinguishing among the effects produced by each film and revealing the diverse ways in which images of nature are mediated, Whitley urges us towards a more complex interpretation of the classic Disney canon and makes an important contribution to our understanding of the role popular art plays in shaping the emotions and ideas that are central to contemporary experience.

How science consultants

make movie science plausible, in films ranging from 2001: A Space Odyssey to Finding Nemo. Stanley Kubrick's 2001: A Space Odyssey, released in 1968, is perhaps the most scientifically accurate film ever produced. The film presented such a plausible, realistic vision of space flight that many moon hoax proponents believe that Kubrick staged the 1969 moon landing using the same studios and techniques. Kubrick's scientific verisimilitude in 2001 came courtesy of his science consultants—including two former NASA scientists—and the more than sixty-five companies, research organizations, and government agencies that offered technical advice. Although most filmmakers don't consult experts as extensively as Kubrick did, films ranging from A Beautiful Mind and Contact to Finding Nemo and The Hulk have achieved some degree of scientific credibility because of science consultants. In Lab Coats in Hollywood, David Kirby examines the interaction of science and cinema: how science consultants make movie science plausible, how filmmakers

negotiate scientific accuracy within production constraints, and how movies affect popular perceptions of science. Drawing on interviews and archival material, Kirby examines such science consulting tasks as fact checking and shaping visual iconography. Kirby finds that cinema can influence science as well:

Depictions of science in popular films can promote research agendas, stimulate technological development, and even stir citizens into political action.

This is a self-help book for every Stacey and Thomas who wish they do that "thing" they have been putting off. It is written with utmost respect, love and desperation to see all people realize just how capable and potent they are. Finding Me Now is also written with simplicity and it is therefore easy to follow and understand. The book utilizes tangible/realistic examples to bring the

point home. One would only regret not reading it sooner. "This book will take you on a journey of self-discovery. It will serve you with some brutal honesty, told in a humorous manner." Club Readership.

An Oprah.com "Best Book for National Reading Month" Forget the Kama Sutra. When it comes to inventive sex acts, just look to the sea. There we find the elaborate mating rituals of armored lobsters; giant right whales engaging in a lively threesome whilst holding their breath; full moon sex parties of groupers and daily mating blitzes by blueheaded wrasse. Deep-sea squid perform inverted 69s, while hermaphrodite sea slugs link up in giant sex loops. From doubly endowed sharks to the maze-like vaginas of some whales, *Sex in the Sea* is a journey unlike any other to explore the staggering ways life begets life beneath the waves. Beyond a deliciously voyeuristic excursion, *Sex in the Sea* uniquely connects the timeless topic of sex with the timely issue of sustainable oceans. Through overfishing, climate

change, and ocean pollution we are disrupting the creative procreation that drives the wild abundance of life in the ocean. With wit and scientific rigor, Hardt introduces us to the researchers and innovators who study the wet and wild sex lives of ocean life and offer solutions that promote rather than prevent, successful sex in the sea. Part science, part erotica, *Sex in the Sea* discusses how we can shift from a prophylactic to a more propagative force for life in the ocean.

place one adventure at a time in Jason Henderson's *Young Captain Nemo*, first in a new middle-grade series. Gabriel Nemo is not your typical 12-year-old. A descendant of the famous Captain Nemo, he spent the first years of his life living in obscurity, isolated in his parents' peaceful underwater research lab. But with his older sister off following in their ancestor's footsteps, sinking whalers and running away from vengeful navies, Gabriel decides it's time to forge his own path, and use his Nemotech legacy for good. Armed only with his wits, his friends, and his Nemotech submarine, Gabriel embarks on a series of daring rescues and exciting undersea battles. But when Gabriel's sister suddenly appears with proof of previously undiscovered sea creatures—giant beasts inhabiting wrecked war planes and ships—Gabriel and his new friends must face their biggest and most dangerous mission ever!

Finalist for the Lane Anderson Award Finalist

for the RBC Taylor Award “Hugely impressive, a major work.”—NPR A pioneering and groundbreaking work of narrative nonfiction that offers a dramatic new perspective on the history of humankind, showing how through millennia, the mosquito has been the single most powerful force in determining humanity’s fate Why was gin and tonic the cocktail of choice for British colonists in India and Africa? What does Starbucks have to thank for its global domination? What has protected the lives of popes for millennia? Why did Scotland surrender its sovereignty to England? What was George Washington's secret weapon during the American Revolution? The answer to all these questions, and many more, is the mosquito. Across our planet since the dawn of humankind, this nefarious pest, roughly the size and weight of a grape seed, has been at the frontlines of history as the grim reaper, the harvester of human populations, and the ultimate agent of historical change. As the mosquito transformed the landscapes of civilization, humans were unwittingly

required to respond to its piercing impact and universal projection of power. The mosquito has determined the fates of empires and nations, razed and crippled economies, and decided the outcome of pivotal wars, killing nearly half of humanity along the way. She (only females bite) has dispatched an estimated 52 billion people from a total of 108 billion throughout our relatively brief existence. As the greatest purveyor of extermination we have ever known, she has played a greater role in shaping our human story than any other living thing with which we share our global village. Imagine for a moment a world without deadly mosquitoes, or any mosquitoes, for that matter? Our history and the world we know, or think we know, would be completely unrecognizable. Driven by surprising insights and fast-paced storytelling, *The Mosquito* is the extraordinary untold story of the mosquito’s reign through human history and her indelible impact on our modern world order.

IBPS PO Examination Solved Papers Routledge One fish, two fish, red fish, nearly thirty thousand species of fish -- or fishes, as they are properly called when speaking of multiple species. This is but one of many things the authors of this fascinatingly informative book reveal in answering common and not-so-common questions about this ubiquitous group of animals. Fishes range in size from tiny gobies to the massive Ocean Sunfish, which weighs thousands of pounds. They live in just about every body of water on the planet. Ichthyologists Gene Helfman and Bruce Collette provide accurate, entertaining, and

sometimes surprising answers to over 100 questions about these water dwellers, such as "How many kinds of fishes are there?" "Can fishes breathe air?" "How smart are fishes?" and "Do fishes feel pain?" They explain how bony fishes evolved, the relationship between them and sharks, and why there is so much color variation among species. Along the way we also learn about the Devils Hole Pupfish, which has the smallest range of any vertebrate in the world; Lota lota, the only freshwater fish to spawn under ice; the Candiru, a pencil-thin Amazonian catfish that lodges itself in a very personal place of male bathers and must be removed surgically; and many other curiosities. With over 100 photographs -- including two full-color photo galleries -- and the most up-to-date facts on the world's fishes from two premier experts, this fun book is the perfect bait for any curious naturalist, angler, or aquarist. The Lancet London JHU Press A book about sex and gender diversity in nature. *Why Are Orangutans Orange?* Penguin How are human societies

changing the global environment? Is sustainable development really possible? Can environmental risks be avoided? Is our experience of nature changing? This book shows how questions about the environment cannot be properly answered without taking a sociological approach. It provides a comprehensive guide to the ways in which sociologists have responded to the challenge of environmental issues as diverse as global warming, ozone depletion, biodiversity loss and marine pollution. It also covers sociological ideas such as risk, interpretations of nature, environmental realism, ecological modernization and globalization. Environmentalism and green politics are also introduced. Unlike many other texts in the field, the book takes a long-term view, locating environmental dilemmas within the context of social development and globalization. The Environment: A Sociological Introduction is unique in presenting environmental issues at an introductory level that assumes no specialist knowledge on the part of

readers. The book is written in a remarkably clear and accessible style, and uses a rich range of empirical examples from across the globe to illustrate key debates. A carefully assembled glossary and annotated further reading suggestions also help to bring ideas to life. The book will be a valuable resource for students in a range of disciplines, including sociology, geography and the environmental sciences, but also for anyone who wants to get to grips with contemporary environmental debates.

One moment that changes both of their lives forever. If it weren't for the 57 bus, Sasha and Richard never would have met. Both were high school students from

Oakland, California, one of the most diverse cities in the country, but they inhabited different worlds. Sasha, a white teen, lived in the middle-class foothills and attended a small private school. Richard, a black teen, lived in the crime-plagued flatlands and attended a large public one. Each day, their paths overlapped for a mere

eight minutes. But one afternoon on the bus ride home from school, a single reckless act left Sasha severely burned, and Richard charged with two hate crimes and facing life imprisonment. The 57 Bus is Dashka Slater's true account of the case that garnered international attention and thrust both teenagers into the spotlight.
