This book uses the study of philosophical texts to raise and explore metaphysical issues. On one level, each essay addresses a scholarly issue in a classical text, often a text of Aristotle's. On a deeper level, the issues Halper considers are metaphysical. However, unlike thinkers who have brought linguistic analysis and contemporary metaphysical notions to these texts, Halper approaches them to find their formulations of issues and their strategies of pursuit. Halper is not concerned with the defense of metaphysical commitments but with finding and exploring paths of metaphysical inquiry. The essays in this volume are exploratory and exegetical rather than decisive. Their contribution to metaphysics lies in the issues they raise, the methods they explore, and their conception of metaphysics as a discipline rooted in philosophical problems.

In this book, the author analyzes plant form and how it has evolved in response to basic physical laws. He examines the ways these laws limit the organic expression of form, size, and growth in a variety of plant structures and in plants as whole organisms, drawing on both the fossil record and studies of extant species.

Contemporary research in the field of evolutionary developmental biology, or 'evo-devo', has to date been predominantly devoted to interpreting basic features of animal architecture in molecular genetics terms. Considerably less time has been spent on the exploitation of the wealth of facts and concepts available from traditional disciplines, such as comparative morphology, even though these traditional approaches can continue to offer a fresh insight into evolutionary developmental questions. The Development of Animal Form aims to integrate traditional morphological and contemporary molecular genetic approaches and to deal with post-embryonic development as well. This approach leads to unconventional views on the basic features of animal organization, such as body axes, symmetry, segments, body regions, appendages and related concepts. This book will be of particular interest to graduate students and researchers in evolutionary and developmental biology, as well as to those in related areas of cell biology, genetics and zoology.

Scientific experiments using animals have contributed significantly to the improvement of human health. Animal experiments were crucial to the conquest of polio, for example, and they will undoubtedly be one of the keystones in AIDS research. However, some persons believe that the cost to the animals is often high. Authored by a committee of experts from various fields, this book discusses the benefits that have resulted from animal research, the scope of animal research today, the concerns of advocates of animal welfare, and the prospects for finding alternatives to animal use. The authors conclude with specific recommendations for more consistent government action.

"This essay approaches modern Latin American narrative from a predominantly phenomenological and existential perspective and therefore marks a departure from the main currents of contemporary Latin American criticism, which are sociological, historical, semiotic, feminist, even deconstructionist." -- vii (Preface).

Beginning his academic career in Classical Studies, John G. Younger rapidly extended his expertise into prehistoric (Bronze Age) Aegean archaeology, art and architecture, with a particular focus on ancient stone-working... and from this interest came his seminal studies on the iconography of Bronze Age Aegean stone seals, a field on which he has made an indelible mark. He also branched out into Jewish Studies, becoming an expert on early synagogues. His lifelong activism for LGBTQI+ and minority rights, and his early embrace of feminism and the crucial role that women have played in the past (not just in archaeology, but in the ancient world itself) have also informed his teaching and studies regarding ancient and modern notions about gender and sexuality, and these studies have greatly enriched our views of the ancient world, while going a long way toward counteracting the persistently male-centric interpretations of the ancient world characteristic of the past few centuries. He has been a pioneer in the establishment of LGBTQI+ academic programs in the U.S., and in the integration of modern technologies (especially computers) into Classics and archaeology. He has established himself as an international authority on Linear A, the undeciphered writing system of the Minoans; his website containing the corpus of that script is second to none in terms of its value to scholars working on Linear A. His recent and continuing investigations into the identification of prehistoric Aegean myths promises to add yet another facet to what is already a brilliant diamond of a career.

This book discusses the reality of human being by pointing out some of the very fundamental issues that remain hidden from the eyes of the modern and post-modern western thought. By elaborating Mulla Sadra's concept of Soul's origination from the body and its survival through the Spirit, this book explains how the human soul develops stage by stage in a gradual manner from a vegetative body in the womb. By using Mulla Sadra's principles of causality, this book shows how God and his Angels create man and other species on the Earth without denying Darwin's evolutionary theory. In this reference, the role of metaphysical worlds in actualizing human knowledge is also discussed. This book also shows how the human life is a journey back towards its origin i.e. towards God and how this journey would continue even after death. In this reference, this book also explains the principles on the basis of which human soul would continue its life in the post-humus world. This book also clarifies the benefits of focusing onto the self and how this focus may lead to the realization of the Eternal Self of God. In this way, it shows how it is not impossible to experience the post-humus conditions even before death. It also specifies what kind of lifestyle may possibly ensure the occurrence of such mystic experiences.

On February 20, 1665, the Inquisition of Lisbon arrested Maria de Macedo, the wife of a midlevel official of the Portuguese Treasury, after she revealed during a deposition that, since she was ten years old, an enchanted Moor had frequently "taken" her to a magical castle in the legendary land of wonders known as the Hidden Isle. The island paradise was also the home of Sebastian, the former king of Portugal (1557--1578), who had died in battle in Morocco while on crusade in 1578. His body remained undiscovered, however, and many people in seventeenth-century Portugal -- including Maria -- eagerly awaited his return in glory. In Judging Maria de Macedo, Bryan Givens offers a microhistorical examination of Maria's trial before the Inquisition in Lisbon in

1665--1666, providing an intriguing glimpse into Portuguese culture at the time. Maria's trial record includes a unique piece of evidence: a pamphlet she dictated to her husband fifteen years before her arrest. In the pamphlet, reproduced in its entirety in the book, Maria recounts in considerable detail her "journeys" to the Hidden Isle and her discussions with the people there, King Sebastian in particular. Not all of the components of Maria's vision were messianic in nature or even Christian in origin; her beliefs therefore represent a unique synthesis of disparate cultural elements in play in seventeenth-century Portugal. Because the pamphlet antedates the Inquisition's involvement in Maria's case, it offers a rare example of a non-elite voice preserved without any mediation from an elite institution such as the Inquisition, as is the case with most early modern judicial records. In addition to analyzing Maria de Macedo's vision, Givens also uses the trial record to gain insight into the values, concerns, and motives of the Inquisitors in their judgment of her unusual case. He thus not only examines separately two important subcultures in early modern Portugal, but also analyzes how they interacted with each other. Introducing a unique feminine voice from the early modern period, Judging Maria de Macedo opens a singular window onto seventeenth-century Portuguese culture.

Rather than seeking support from the massive scholarly work on the 13th century thinker, Bobik (philosophy, U. of Notre Dame) translates and interprets Aquinas' work on the principles of nature and on the mixture of elements, and uses them as a basis for independent philosophy on the relationship between form and matter in the context of God's creative causality. Paragraphs of the Latin originals are followed by English versions, then Bobik's commentary. Annotation copyrighted by Book News, Inc., Portland, OR
